PROFESSIONAL SUMMARY

Artificial Intelligence, Business Analytics & Information Systems student at the University of South Florida targeting Summer 2026 internships across analytics, business intelligence, business analysis, operations analytics, information systems, and AI-enabled automation. Built 12+ end-to-end portfolio projects spanning Python, SQL, Tableau, Streamlit, SQLite, reproducible ETL, and AI-assisted workflow systems. Quantified independent work includes a \$2.30M sales forecasting analysis, a 1,631-listing market intelligence dashboard with a SQLite-backed Streamlit interface, a SEC EDGAR financial-statement pipeline, and a decision-intelligence platform that runs KPI, forecasting, scenario-analysis, and recommendation engines against a 1,728-record dataset under pytest coverage. Backed by ongoing part-time operations experience supporting events at 15,000–20,000+ attendees.

EDUCATION

University of South Florida — Tampa, FL

B.S. in Artificial Intelligence, Business Analytics & Information Systems

Expected Graduation: May 2027

Relevant Coursework: Business Analytics, Information Systems, Data Analysis, SQL & Databases, Programming Fundamentals (Python, Java), Statistics.

TECHNICAL SKILLS

Languages: Python, SQL, R, JavaScript, HTML/CSS, Java

Data & Analytics: pandas, ETL pipelines, data cleaning, data validation, KPI design, exploratory data analysis, business-question framing

BI & Visualization: Tableau, Power BI, Streamlit, Plotly, Excel

Databases: SQLite, warehouse-style schemas, joins, aggregations, reusable views

AI & Automation: Claude Code, Codex, Cursor, Anthropic Console, prompt engineering, LLM tool orchestration, validation loops, human-in-the-loop review, n8n, Zapier, Glean, Obsidian

Tools & Workflow: Git, GitHub (branching, draft PRs, merge strategies), VS Code, PowerShell, pytest, unittest, Markdown, README-driven documentation

PROJECTS

Decision Intelligence Lab — *Python, pandas, pytest* | github.com/tylerdobson

- Engineered modular KPI, forecasting, scenario-analysis, and recommendation engines using a 1,728-record dataset to answer defined business questions.
- Built pytest coverage across analysis modules to improve reproducibility, catch regressions, and support reliable iteration.
- Structured outputs around decision-making use cases including trend analysis, scenario comparison, and recommendation logic.

Airbnb Market Intelligence Dashboard — *Python, SQL, SQLite, Streamlit* | github.com/tylerdobson

- Analyzed 1,631 listings to surface pricing, occupancy, licensing, and revenue patterns across the market.
- Quantified \$179.46 average nightly rate, approximately \$37.66M in revenue proxy, and 58.98% licensed inventory share.
- Built an interactive Streamlit dashboard backed by a SQLite analytical warehouse with reusable views for repeatable reporting.

Tableau Forecasting & Discount Analysis — *Tableau* | github.com/tylerdobson

- Analyzed \$2.30M in sales (+13.6% YoY) across regions, customer segments, and product categories at a 12.4% margin.
- Built Tableau dashboards isolating discount impact on profitability and surfacing performance drivers by region and segment.

- Produced a forecast projecting approximately \$415K in profit to support business planning and performance review.

SEC Financial Statement ETL Pipeline — *Python, ETL* | github.com/tylerdobson

- Built an end-to-end ETL pipeline ingesting SEC EDGAR filings into structured balance sheet, income statement, and cash flow tables.
- Designed reproducible transformations with explicit schemas and documented assumptions for downstream financial analysis.
- Organized financial-statement data into analysis-ready outputs to support repeatable company-level review.

SQL Retail Revenue & Labor Market Analysis — *SQL, SQLite* | github.com/tylerdobson

- Authored warehouse-style schemas, reusable SQL views, and analytical queries for revenue, customer, and segment trend analysis.
- Built a parallel labor-market intelligence project analyzing affordability and income trends using reusable query patterns.
- Applied joins, aggregations, filtering, and structured reporting logic to convert raw data into business-facing insights.

Job Market Skill Radar (private; in active development) — *Python (stdlib), unittest*

- Sanitized 17-posting internship pilot corpus, extracted skill signals, and mapped them to category and role-family summary CSVs.
- Generated Markdown evidence-gap reports linking required skills to existing portfolio artifacts.
- 24 passing unit tests with banned-language guard for output discipline; MIT licensed.

Spotify Analytics — *Python, Spotipy, SQLite, Streamlit, Plotly, pytest* | github.com/tylerdobson

- Built audio-feature, popularity, and listening-trend analyses on Spotify data with a Streamlit visualization layer, SQLite persistence, and pytest coverage.

Canvas Assignment Calendar Agent — *Python, Canvas API* | github.com/tylerdobson

- Built a lightweight agent that pulls assignment data from the Canvas API and structures it into time-based calendar events.

Sales Data Cleaning & Standardization Pipeline — *Python, pandas, SQLite* | github.com/tylerdobson

- Cleaned messy retail sales exports, separated invalid records, and published standardized outputs for downstream analysis.

Job Application Quick-Fill — *Python (CLI)* | github.com/tylerdobson

- Lightweight Python CLI for saving, searching, and reusing job-application answers across multiple application portals.

Portfolio Site — *HTML, GitHub Pages* | tylerdobson.github.io

- Public portfolio site presenting end-to-end project workflows with clean, README-driven documentation.

CERTIFICATIONS

- **Programming with Python Professional Certificate** — OpenEDG Python Institute · May 2026 (*Python, Object-Oriented Programming*)
- **Career Essentials in Data Analysis** — Microsoft & LinkedIn · Apr 2026 (*Data Visualization, Data Analytics*)
- **Career Essentials in GitHub Professional Certificate** — GitHub · Apr 2026 (*Business Analytics, GitHub*)

EXPERIENCE

Bar Back, Oak View Group — *Tampa, FL | Part-Time | Jan 2026 – Present*

- Support inventory and beverage operations during large-scale events with 15,000–20,000+ attendees.
- Assist in organizing, tracking, and restocking tens of thousands of products across multiple service areas.
- Maintain efficient service flow in high-volume event environments by coordinating restocking, product movement, and operational support.
- Demonstrate team collaboration, inventory awareness, and execution under time-sensitive event conditions.

Bartender, Legends Global — *Philadelphia, PA | Part-Time | May 2024 – Present*

- Deliver beverage service during large-scale events with attendance approaching 20,000 while maintaining speed, accuracy, and service consistency.
- Process 200+ transactions per shift using multiple POS systems, including Clover, Toast, and Micros.
- Maintain organized workflow and accurate transaction processing under sustained high-demand conditions.
- Support event operations through efficient service execution, guest communication, and coordination with team members during peak-volume periods.

LEADERSHIP

Social Resources Chair, Alpha Epsilon Pi Fraternity (Psi Phi) — *Nov 2025 – Present*

- Coordinate event logistics, resource planning, vendor communication, and executive board updates under budget and compliance constraints.

National Society of Leadership and Success (NSLS) — *Sep 2024 – Present*

- Completed leadership development covering communication, accountability, team development, and public speaking.

Future Business Leaders of America, University of South Florida Chapter — *Member | Current*

- Participate in chapter programming covering business leadership, career-readiness, and professional networking with peers across business, analytics, finance, and information systems.

AI-ASSISTED WORKFLOW APPROACH

Uses Claude Code, Codex, Cursor, and Anthropic Console alongside Git/GitHub, pytest, and Obsidian to keep synthesis (drafting and exploration) separate from validation (tests, reviews, documentation). Workflow emphasizes prompt design, tool orchestration, validation loops, and human-in-the-loop review. Currently learning and applying AI-engineering-style practices inside real, reproducible projects.

EVIDENCE DISCIPLINE

Every project leads with a defined business question; bullets and READMEs only claim what is backed by artifacts. Public repos are README-driven and sanitized — no raw PDFs, postings, secrets, or private paths in public history.
